

CONNECTED HEALTH SOLUTIONS

Visualize the Future of Connected Health

CONNECTING WITHOUT BOUNDARIES

The use of Telehealth solutions has quickly grown in recent years thanks to technological advancements and improvements in internet accessibility. We are no longer connected through simple data and messages, but by remote, seamless audiovisual media that is delivered to convey the needs of medical professionals, patients and their family members.

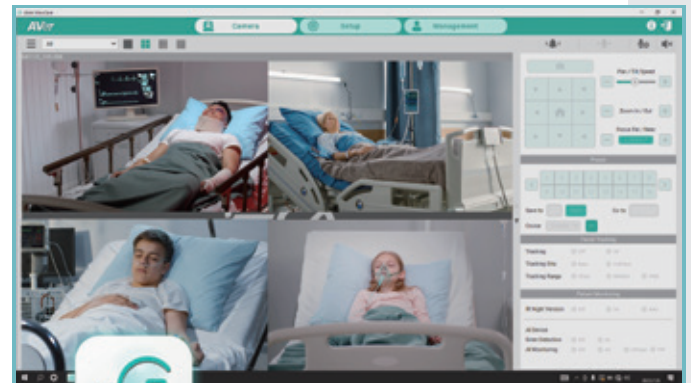

By utilizing audiovisual solutions in combination with other medical ICT devices and services, Telehealth has taken significant steps forward to enable accurate and reliable remote patient monitoring, Telemedicine sessions and virtual collaboration. Healthcare professionals can count on these smart tools to improve their efficiency, and patients can expect an ever-increasing quality of care thanks to these new technologies that **connect everyone without boundaries**.

MONITORING WITHOUT DISTANCE

Remote patient monitoring has entered the realities of intensivists and critical care nurses as an essential service thanks to the digitalization of medical services. Combined with audiovisual aids, healthcare professionals can monitor patients for even the smallest of physiological changes or data on patient monitors from a remote site.

Saving both time and resources, while maintaining the quality of care and procedures is key to hospital management.
